Content

- Weaving analyses
- Weaving theory with definitions and design of single and double weaving
- Design and sketch work of selected handlooms and weaving machines
- Experimental weaving
- Pattern production and sample weaving of shaft and jacquard weaving
- Yarn and weaving calculations

Learning Outcomes

The course aims to develop artistic ability within weaving through the application and experimental investigation of the expressive and functional opportunities offered by different weaving techniques.

After completing and passing the course, students should be able to:

1. analyse and describe the structure, properties, construction and patterning opportunities of different woven fabrics,
2. carry out yarn and weaving calculations for industrial weaving,
3. apply knowledge within weaving theory,
4. carry out and run experimental design work in weaving,
5. apply appropriate techniques and materials in relation to their own design concepts,
6. document and reflect on technology in relation to the design process.

Forms of Teaching

Tuition consists of lectures, seminars, laboratory work and tutoring.

The language of instruction is English.
